

Shijiazhuang Mets Machinery Co., Ltd
Metslurry Engineering Pty Ltd

To be your spare parts warehouse and workshop

About company

Shijiazhuang Mets Machinery Ltd. (hereinafter referred to as Mets Machinery) is an international company specializing in manufacturing and the service of slurry pumps. The head office is located in high-tech development zone, Shijiazhuang City, Hebei Prov., Mets Machinery manage Hebei Hanchang Minerals Co., Ltd and several international subsidiaries.

Mets Machinery was founded in 2008, The company always regards product quality, research and development as its lifeline. 30% are technical developers among nearly 100 Chinese and foreign employees in the company. Mets Machinery has invested more than 120 million yuan in technology, quality inspection and production process improvement In the past 10 years, which ensures the world-class quality of our products.

Our service mission is to become the spare parts expert of our customers. We always adhere to the customer-oriented principle. We have been building warehouses and service centers in the world's major mining areas, taking the consignment sales to a deeper level.

Moreover Mets machinery actively builds the most complete spare parts warehouse and the most professional after-sales service team. Now the warehouse and workshop in Perth, Australia and Laos in Southeast Asia have been put into operation. After-sales service centers in the Middle East, the commonwealth of independent states, South America and central Africa are being planned and built step by step.

We insist on providing reliable and high quality accessories for customers in the shortest time.

Office

Quality service

- Mets Machinery provides only quality service focused on the interests of our customers.

Mets Machinery provides service before purchasing goods, during operation, throughout the entire operation cycle aggregates. We focus on the needs of our customers and set priorities energy efficiency and speed of service so that every customer is pleased with the quality and value of our services.

Pre-sale service

- Perfect solution for the new slurry delivery system.
- Technical support and spares storage service for slurry pump application site.
- Mets Machinery can provide you with a series of full-size slurry pumps to meet different working conditions.

Mets Machinery can not only provide you with standard pumps and spares but customized services. We are committed to finding better suppliers for you, so as to obtain high quality products at very favorable prices. Whether you are looking for the part that very hard to find, or you are finding an effective solution for your mining equipment problems, Mets Machinery can solve all your problems. We are proficient in the mining industry and the unique needs of customers.

Stock

After sales service

- Mets Machinery provides supervision and guidance during installation and is responsible for confirming the completion of equipment installation.

Mets Machinery guarantees that the goods supplied are of high quality, made of first-class technology and the best materials, and fully meet the technical conditions stipulated by the national, industrial and enterprise standards or the technical conditions stipulated in the contract, and that the equipment after proper installation, normal operation and maintenance, has satisfactory performance during its service life. After the completion of equipment manufacturing, the quality and performance requirements of the equipment shall be inspected in detail and comprehensively in accordance with relevant standards and contract provisions, so as to meet the requirements of the buyer, and the product quality certificate shall be issued.

- After the installation of the equipment, Mets Machinery will supervise the commissioning work carried out by purchaser and be responsible for the on-site operation and maintenance of the products.
- Mets Machinery warehouse has large storage capacity and complete range of spare parts, which can effectively shorten the delivery time. Mets Machinery will provide spare parts and regular or irregular maintenance services for equipment at preferential prices and high-quality services.

Reproduction OEM parts

Mets Machinery is committed to providing high quality spare parts and OEM services for the processing plant, we maintain our leading position in measuring tools, material testing, balance testing in the industry and have rich experience in slurry and equipment solutions. With excellent products and services Mets Machinery has customers in five major mines around the world.

The customer's original purchase cost was USD\$ 300,000 per year. Through our surveying and re-production, the purchase cost was reduced to USD\$ 160,000 per year while the product life was increased by 30%. And delivery time was reduced from three months to 45 days, which greatly saved the cost of spare parts.

Service Objective

Our service mission is to become the spare parts expert of our customers. We always adhere to the customer-oriented principle. We have been building warehouses and service centers in the world's major mining areas, taking the consignment sales to a deeper level. Moreover Mets machinery actively builds the most complete spare parts warehouse and the most professional after-sales service team. Now the warehouses and workshops in Perth, Australia and Laos in Southeast Asia have been put into operation.

After-sales service centers in the Middle East, the commonwealth of independent states, South America and central Africa are being planned and built step by step.

We insist on providing reliable and high quality accessories for customers in the shortest time.

Our Team

Our production

Shijiazhuang Mets Machinery manufactures and supplies pumps in more than 150 countries and regions around the world. Our products include slurry pumps, pipelines one armature (ball valve, relief valve, etc.), balls mill, swirl crusher, etc. for more than 10 years Mets Machinery provides its customers with optimal solutions for ore pulp transfer and spare parts of excellent quality.

Slurry Pump Models

• Slurry pump MS (R)

MS(R) hard metal/rubber heavy duty slurry pumps are designed for the most difficult pumping applications for high abrasive, high density or erosive slurries. Super-thick wet point and perfect impeller structure ensure a long service life of pumps and make maintenance more convenient.

Pump with rubber lined expand its application to chemical products handling. Mets Machinery supplies several different rubber options to meet different application needs. This type of pump is especially suitable for applications like mill discharge, tailing transportation.

• Slurry pump MG (H)

MG (H) pumps are designed for pumping high abrasive slurry which containing large particles. Its large inside passage casing makes it the best choice for gravel, dredging and other applications where large particles needed to be handled, especially for big flow, high concentration, high head media. Low NPSH requirement and robust design ensures long life under severe duties.

• Slurry pump MSP (R)

MSP (R) pumps are designed to handle abrasive and highly corrosive slurry in pits and sumps. This type of pump has no shaft seal, which ensures low cost and convenient maintenance. Hard metal and rubber parts are optional for different applications and are interchangeable.

In addition to the above three main models, vertical main foam pump, horizontal foam pump, high-pressure slurry pump, high-speed slurry pump, etc. We continuously develop innovative products, now a large number of models slurry pumps are in the process of testing.
